

memoryzoom9000

The choice for people who truly love a sumptuous mattress, topped with memory foam which supports your whole body in blissful comfort.

MATTRESS FEATURES

Pocketed Springs encased in foam

2500 In a 150cm x 200cm mattress. Each pocketed spring is nested in a honeycomb pattern and hand tied with linen cord. Pocketed springs shape perfectly to individual body contours due to each spring having its own independent action. The upper layer of springs shape to the body contours while the lower layer absorbs changes in weight distribution for the ultimate in comfort and support.

Spring tension

Available in one tension only.

Easy care - no turn mattress

No need to turn the mattress, although regular rotation will extend its life.

Anti-allergenic layer

Sterilised and dust free layers, therefore ideal for allergy sufferers.

Resilient foam

Provides a resilient and supportive surface feel.

Foam encasing

The pocketed springs are encased with foam to provide added comfort and support.

Top layer: 25mm foam
Borders: 100mm Deep foam
Base layer: 50mm foam

Deep layer of memory foam

70mm in the mattress. The visco elastic memory foam responds to your body temperature conforming perfectly to your body contours to provide perfect support, helping to reduce stress and relieve aches and pains.

5 Year guarantee

For your peace of mind, relyon offer a 5 year guarantee on all mattresses purchased with a divan base.

Deep luxurious quilted sleeping panel with Coolplus® soft stretch knit fabric top

Coolplus® is an advanced functional fibre that helps to regulate your body temperature so it does not exceed 37°C for a dry and comfortable night's sleep. Micro-slits in the fibre increases the surface area and creates a capillary action enabling quick-drying, water wicking and air permeability properties to rapidly absorb and diffuse warm air and body moisture to keep the skin fresh. The benefits of Coolplus® do not wear off, as the functions come from the structure of the fibre itself. Coolplus® has 12% - 74% higher diffusion ability and 11% - 47% higher drying effect than that of cotton.
